3-in-1 CCNA

Cyber Security's Authorized CCNA, CCENT, CCDA, CCNA: Security Quad Certification Boot Camp is a 7-day accelerated, in-depth course that can help IT professionals build a foundation in and apprentice knowledge of networking. CCNA/CCENT certified professionals can install, configure, and operate LAN, WAN, and dial access services for small networks including but not limited to use of these protocols: IP, EIGRP, Serial, VLANs, RIP, Ethernet, and OSPF.

Cyber Security is excited to offer you our Authorized Quad Cisco Certified Network Associate (CCNA) Boot Camp, an innovative 7 day training course designed specifically for network engineers and administrators requiring full knowledge of Cisco router and switch configuration. Cyber Security has been known for quality training since 2002, and our CCNA boot camp has been one of the cornerstones of our educational portfolio available to students. We have the highest commitment in the industry to quality courseware, instruction and exam prep.exams, you then train directly on CCNA: Security and CCDA curricula all in one sitting.

Why our Training Course?

In today's economy, there are many CCNA certified individuals on the job market. To distinguish yourself, it is important to demonstrate proficiencies in the subject areas most needed by employers today: routing and switching, infrastructure design, and security. In our survey of the networking professional job market, a majority of enterprise networking positions require or desire experience in network design and security in addition to core routing and switching skills.

In our module by module analysis of the official CCENT/CCNA courseware, we have discovered many areas that overlap between the CCNA courseware and the CCDA and CCNA: Security courseware. The Cyber Security Quad Cisco Certified Network Associate: Security Boot Camp course gives you the opportunity to apply your knowledge learned in the CCNA/CCENT portion of the boot camp to the CCDA and CCNA: Security portion immediately!

Cyber Security also supplements your core routing and switching knowledge in class with an additional focus on the two hottest areas of networking: network security and infrastructure design. In this course, we prepare you for exam success and after passing the exams, you then train directly on CCNA: Security and CCDA curricula all in one sitting.

About the Course

In the Cyber Security Quad Cisco Certified Network Associate: Security Boot Camp, you increase skills through hands-on practice using remotely accessed pods of Cisco equipment. There is no better way to gain real-world hands on experience than in our lab environment. In addition, the most difficult portion of the exam is typically the sim questions, which require you to have intimate knowledge of how to properly configure routers and switches. Our lab environment prepares you for exam success, as well as for a real-world networking and switching environment.

Cyber Security also prepares you for success by sending you pre-study material PRIOR to the start of the course. You can begin your learning process as soon as you enroll, so that you can learn the basics on your own and maximize the time spent in-class with the instructor.
