

Computer and Mobile Forensics Training Boot Camp

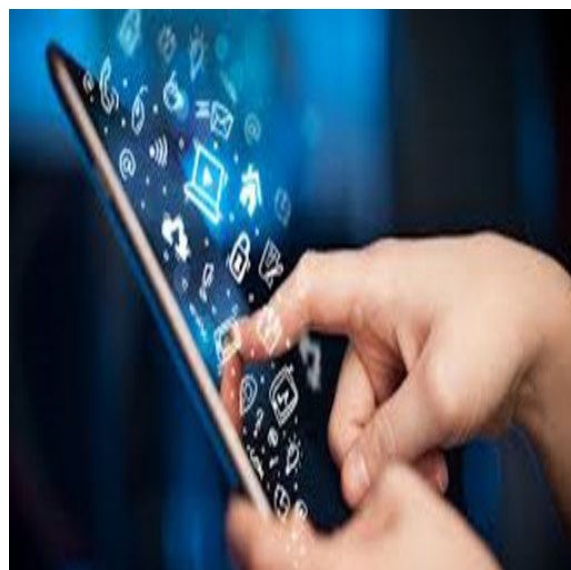

Cyber Security Institute is proud to offer the combined Computer and Mobile Forensics boot camp. Accelerated and taught in seven days, this in-depth course teaches students critical techniques and information about identifying, preserving, extracting, analyzing and reporting forensic evidence on computers and mobile devices through use of the most popular computer forensic tools.

Our combined Computer and Mobile Forensics boot camp prepares you for two industry-recognized computer forensic certifications, the IACRB Certified Computer Forensics Examiner (CCFE) and the IACRB Certified Mobile Forensics Examiner (CMFE). You are prepared for the certification examinations by learning the necessary skills to recognize computer threats and investigate computer crime. You will learn about the challenges of computer and mobile forensics; walk through the process of analysis and examination of operating systems and mobile devices; and gain deep understanding of differences in evidence locations and examination techniques on Windows and Linux computers and on Android, iOS and Windows phones.

Our hands-on labs follow a cohesive scenario simulating a real cyber-crime investigation and allow you to gain practical skills in locating and examining evidence on devices and forensic images, as well as analyzing and reporting findings. You will work with various commercial and open-source forensic tools within our unique cloud-based learning platform.

Upon the completion of our Comprehensive Computer and Mobile Forensics boot camp, you will know how to:

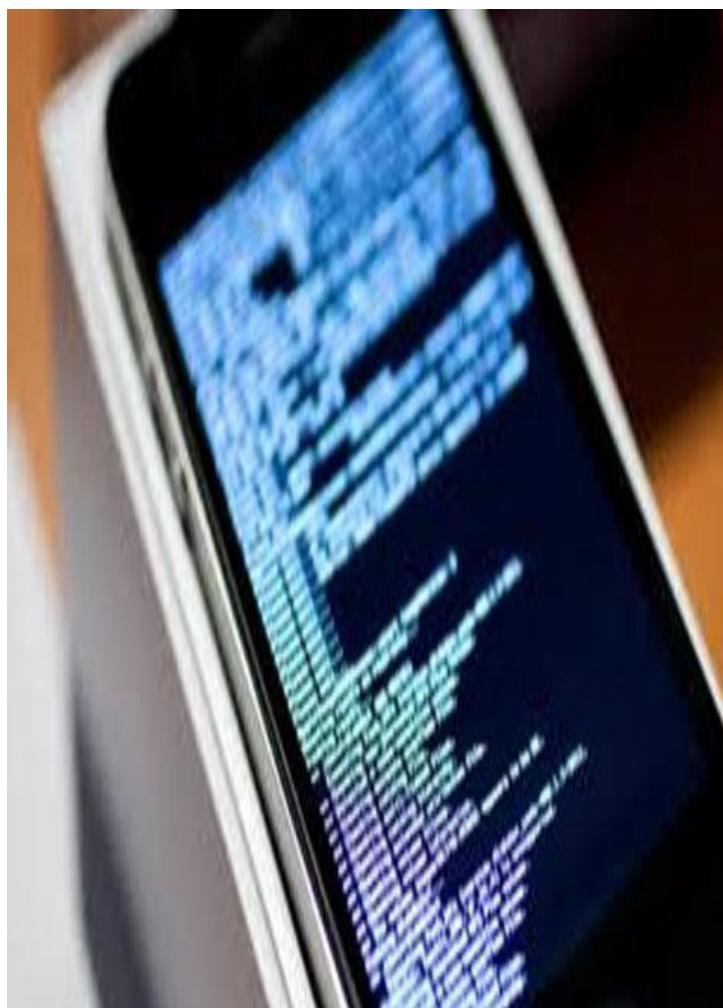

- Firmly understand the provisions of IT law
- Learn complex technical concepts
- Successfully define evidence-handling procedures
- Comprehend the general rules of evidence
- Apply the fundamental computer and mobile forensics concepts to forensic investigations
- Identify key technologies used in computers and mobile devices
- Acquire forensic evidence
- Locate forensic artifacts in various operating systems
- Analyze extracted evidence and properly report findings
